(54) Title: ASSISTANT CEILING DEVICE FOR SHIELDING ESCAPE HATCH OF ELEVATOR

(57) Abstract: An assistant ceiling device designed to shield an escape hatch installed to a ceiling of an elevator cab. The assistant ceiling device comprises two elongated rail (10) and a rectangular assistant ceiling plate (20). Each guide (10) is installed at either side of the emergency escape hatch (1), and has a length longer than that of the emergency escape hatch and shorter than that of the ceiling of the elevator cab. The assistant ceiling plate (20) is laid on the rail guides (10) to shield the emergency escape hatch (1). Each guide (10) has a latching jaw (12) so as to allow the assistant ceiling plate (20) to be installed to the rail guides (10) by laying both opposite sides of the ceiling plate on the latching jaws (12). Each guide (20) is formed, at an upper end, with a slot through which a head of a bolt cannot pass, and with a guide recess (18) through which the head of the bolt can freely move. The rail guides (10) can be fastened to the ceiling of the elevator cab with the bolts equipped to the rail guides (10).
